EFFECTIVE GUIDE TO WARP

Warp Configuration Reference

CARD 01 / 05

CLASSIFIED

CLASSIFIED

LONG DISTANCE AND HEAT EFFECTIVE

CONFIGURATION

WARP	2
POWER	136%
COOLANT	100%

PERFORMANCE

TOP SPEED	2.72 U/s
WARP DRAIN	3.1 energy/s
TOTAL DRAIN	3.6 energy/s
DISTANCE	416U (~21 sectors)

NOTE

The warp system will never accumulate heat in this setup, and you're only limited by the amount of energy stored on your ship. You'll be arriving with drained power cells, but you'll get there.

CARD 02 / 05

CLASSIFIED

CLASSIFIED

VERY LONG DISTANCE WARP

CONFIGURATION

WARP SETTING	1
WARP	149% power, 70% coolant
REACTOR	149% power, 30% coolant
MANOEUVRING	100% power
SCANNERS	100% power
OTHER SYSTEMS	0% power

PERFORMANCE

TOP SPEED	1.49 U/s
DISTANCE	Unlimited

NOTE

This setup requires you to disable every system except manoeuvring and scanners, kept online so you can avoid obstacles and scan incoming enemies. To keep more systems online, put more power/coolant into the reactor and pull some from warp. The balance point is fine, so err on the side of the reactor.

CARD 03 / 05

CLASSIFIED

CLASSIFIED

WARP 4 QUICK

CONFIGURATION

WARP	4
POWER	300%
COOLANT	100%

PERFORMANCE

TOP SPEED	12 U/s (theoretical)
MAX TIME	20 seconds
DISTANCE	110U (~5.5 sectors)

WARNING

This will completely destroy your warp drive. Don't take this lightly, and make sure to drop out of warp before those 20 seconds are up. If you don't, you may not be able to leave warp 4 - your drive will constantly overheat and destroy itself as you try to repair it.

CARD 04 / 05

HOW TO PULL A SICK DONUT

1. Increase manoeuvring to max on engineering
2. Go into warp 3
3. Turn heavily 180
4. Combat to the side and adjust to get the circle
5. Come out of warp

(crude diagram: circle the target while staying locked on)

NOTE
Do not tell Dent if manoeuvre performed.

CARD 05 / 05
